
Account Research Brief

Cascade Logistics Partners | Regional 3PL & Freight Brokerage | Prepared for outreach planning, 2026

Company Overview

Cascade Logistics Partners is a regional third-party logistics (3PL) and freight brokerage founded in 2009 and headquartered in Charlotte, North Carolina. The company employs roughly 410 people and serves manufacturing and retail clients across the Southeast United States, operating a mixed fleet and brokered carrier network.

Strategic Priorities & Business Initiatives

In Q4 2025, Cascade acquired a regional carrier to expand its owned-fleet capacity in the Carolinas and Georgia. Integration of the acquired carrier's systems is ongoing through 2026. Leadership has publicly prioritized unifying transportation and warehouse management systems post-acquisition and improving real-time shipment visibility for enterprise clients ahead of a competitive RFP season.

Recent Signals & Trigger Events

Q4 2025 acquisition of a regional carrier is still mid-integration, with two parallel TMS/WMS systems currently in use.

RFP season opens Q3 2026 for three enterprise accounts representing a meaningful share of recurring revenue, with renewal decisions expected by year end.

Two of those enterprise accounts have flagged renewal concerns tied specifically to shipment visibility, per account team notes shared in Cascade's Q1 2026 client advisory board recap.

Competitive & Market Position

Cascade competes against other regional 3PLs primarily on service breadth (brokerage plus owned fleet) since the carrier acquisition. Larger national 3PLs offer more mature client-facing tracking portals, which enterprise prospects increasingly expect as table stakes during RFP evaluation.

Key Stakeholders

Economic buyer: VP of Operations, accountable for the post-acquisition systems integration.

Likely champion: Director of IT, who owns the TMS/WMS consolidation project directly.

Influencers: Enterprise Account Management lead, who owns the at-risk renewal relationships ahead of the Q3 2026 RFP season.

Key Pain Points & Challenges

Pain Point	Business Impact	Severity
Two disparate TMS/WMS systems post-acquisition	No single source of truth for shipment or inventory status across the combined fleet	High
Missed SLA delivery windows	18% of shipments fell outside contracted delivery windows over the past two quarters	High
Enterprise clients demanding real-time tracking	Current systems provide only daily batch updates, not live tracking	High
Manual reconciliation between the two systems	Contributes to billing disputes and margin leakage on brokered loads	Medium
Renewal risk on key enterprise accounts	2 accounts (~12% of revenue) have flagged visibility gaps ahead of Q3 2026 RFP season	High

Summary

Cascade is mid-way through a systems integration that its own leadership has flagged as a source of client-facing risk, with two enterprise accounts already citing visibility gaps ahead of a Q3 2026 RFP season that will determine a meaningful share of recurring revenue. The combination of an active integration project and a hard renewal deadline makes near-term timing relevant.

This brief reflects publicly available information and account-team observations as of Q2 2026; it should be refreshed as the TMS/WMS consolidation and RFP season progress.
