# Company & Solution Overview

Northbridge Analytics | Real-Time Supply Chain Visibility & Predictive Inventory Platform | 2026

## Who We Are

Northbridge Analytics is a supply chain intelligence company founded in 2016 and headquartered in Austin, Texas, with a distributed engineering team across North America. We serve 140+ mid-market and enterprise manufacturers, distributors, and logistics providers across North America and Europe.

Our flagship product, the Northbridge Visibility Cloud, gives operations and supply chain leaders a single, real-time view across suppliers, warehouses, and carriers — replacing the spreadsheets and disconnected ERP/WMS/TMS exports that most mid-market operators still rely on today.

## The Problem We Solve

Supply chain leaders at growing manufacturers and logistics companies are flying blind past their own four walls. Legacy ERP systems show what happened yesterday inside a single facility; they don't show what's happening at a Tier 2 supplier, in transit, or at a newly acquired site. The result is reactive firefighting: stockouts, expedited freight, missed delivery commitments, and planning built on stale spreadsheets rather than live data.

## Our Solution: Northbridge Visibility Cloud

A cloud-native platform combining three capabilities in one product, rather than the point-tool sprawl most companies stitch together today:

- 1. Multi-tier visibility** — live tracking across Tier 1–3 suppliers, in-transit shipments, and warehouse inventory, unified into one dashboard.
- 2. Predictive demand forecasting** — a machine-learning forecasting engine trained on each customer's historical order and seasonality data, refreshed daily.
- 3. No-code integration layer** — a library of 140+ pre-built ERP, WMS, and TMS connectors (SAP, Oracle NetSuite, Infor, Manhattan, and others), configurable without engineering resources.

## Proven Impact

34% average reduction in stockout incidents within the first two quarters of deployment, measured across our 2025 manufacturing customer cohort.

22% reduction in expedited freight spend for a consumer electronics manufacturer after replacing spreadsheet-based reorder points with Northbridge's predictive reorder alerts.

6 weeks average time-to-first-value, versus an industry average of 4–6 months for comparable enterprise supply-chain suites, driven by our no-code connector library.

## Trust & Compliance

SOC 2 Type II certified and ISO 27001 compliant. Every customer is assigned a dedicated Customer Success Engineer (not a shared support queue) for onboarding and ongoing optimization. Recognized as a Gartner “Cool Vendor” in Supply Chain Visibility (2025) and rated a G2 Leader in the Supply Chain Visibility category for four consecutive quarters.

## How We Compare

| Capability                | Northbridge Visibility Cloud        | Typical Incumbent Platform  |
|---------------------------|-------------------------------------|-----------------------------|
| Supplier visibility depth | Tier 1–3 (multi-tier)               | Tier 1 only                 |
| Demand forecasting        | ML-based, refreshed daily           | Manual / static, quarterly  |
| Integration model         | No-code, 140+ connectors            | Custom engineering project  |
| Typical time-to-value     | ~6 weeks                            | 4–6 months                  |
| Support model             | Dedicated Customer Success Engineer | Shared support ticket queue |

## Learn More

Northbridge Analytics is actively onboarding new manufacturing, distribution, and logistics customers for 2026 deployments. A guided assessment typically takes under an hour and maps directly to the connectors and forecasting models relevant to your environment.
